## Flight conditions

|                        |               |
|------------------------|---------------|
| Flying height          | 200 m         |
| Operational wind speed | Up to 40 km/h |

## Operations

|  |             |
|--|-------------|
| Number of operators for deployment/fold-up | 2 operators |
| Time for deployment/fold-up                | 45 min      |
| Flight endurance with no helium refill     | 5 days      |
| Available power for payload                | 220 W       |
| Data transmission                          | BPL         |

## Logistical footprint

|   |                      |
|---|----------------------|
| Transport and storage type of the tethered aerostat | 5 m <sup>3</sup> van |
|---|----------------------|

## STRENGTHS

**Persistence: 5 days**

**Excellent price to performance ratio**

**Low logistical footprint**

**Easy to deploy and to operate**

**Automated take-off and landing system**
